

YIĞIT ERTÜRK

AI PRODUCT DEVELOPER | FULL-STACK PRODUCT ENGINEER

Samsun, Türkiye (UTC+3) · +90 546 841 54 10 · r.y.erturk@gmail.com · Open to remote (worldwide) & EU relocation
github.com/yigiterturk-dev · linkedin.com/in/yigiterturk · nocturndev.vercel.app · Contractor or EOR (Deel / Remote.com / Oyster)

PROFILE

Product-focused developer and entrepreneur with seven years of business ownership and hands-on delivery of AI, data, geospatial and full-stack software. Currently building TerraLot for VegaWest under a paid contract.

EXPERIENCE

Contract AI Product Developer May 2026 – Present
VegaWest · Remote

Sole engineer on TerraLot, an acquisition-intelligence and operations platform for the U.S. vacant-land market — parcel discovery, underwriting, competitor monitoring, owner outreach and owner-financed resale workflows.

- Built geospatial ingestion and research pipelines covering **565,930+ off-market leads across 15 states and 213 counties**, plus 208,442 comparable sales and 1.3M+ live-measured vacant parcels — re-architected to run unattended and interruption-tolerant on a Linux VPS once local execution proved unviable at that volume.
- Delivered a production Next.js platform with **120 pages and 79 API routes**: mapping, property scoring, provider abstraction, resumable jobs, retries, circuit breakers, usage caps and data-quality safeguards.
- Established source-verification discipline for public records after finding that recorded sale prices misrepresent purchase prices, preventing downstream valuation errors.

Independent AI & Web Product Developer Feb 2026 – Present
NocturnDev · Remote · freelance since 2018

Ship AI-enabled products from concept to deployment, translating business requirements into user flows, interfaces, APIs, data models, integrations and operational tooling.

- Built products across voice AI, retrieval-augmented generation, analytics and generative media using TypeScript, React, Node.js, PostgreSQL and Python data workflows.
- Shipped multi-tenant SaaS on PostgreSQL row-level security with role-based access control and audit logging, serving isolated client tenants in production.
- Delivered a Meta Marketing API advertising cockpit for medical practices; led a security remediation pass covering IDOR exposure, token encryption at rest and Meta App Review requirements.
- Wrote internal quality tooling: an OWASP-oriented audit CLI running static, live and dependency checks against own deployments.

Business Owner & Operations Manager 2018 – 2025
Hospitality Ventures · Samsun, Türkiye

- Led end-to-end operations across multiple ventures: customer experience, supplier relationships, purchasing, cost control, staff coordination and sales.
- Built custom web landing pages, ran local SEO campaigns, and automated internal admin workflows and spreadsheet reporting with custom scripts.

SELECTED PRODUCT WORK

Low-Latency Voice Agent — Claude + Fish Audio S2 Pro conversational system with true streaming, ~1.0-second time-to-first-audio, automatic call records and fast fallback responses.

Lexordo / Legal AI — Citation-grounded legal RAG with hybrid retrieval, PII masking, abstention behavior, document analysis and petition generation.

Nocturn Data Hub — Multi-site event analytics on PostgreSQL with HMAC-signed ingestion, replay protection, deduplication and sensitive-field rejection.

Live deployments — emlakakli.vercel.app · crypto-radar-tr.vercel.app · testereplus.vercel.app · toolcompare.net · gelecekfinans.com

TECHNICAL TOOLKIT

Technology: TypeScript, React, Next.js, Node.js, Python, PostgreSQL, PostGIS, Prisma, Drizzle, Redis, Tailwind CSS, Claude API, Qdrant, Docker, Linux VPS, Vercel

Practices: Full-stack product development, REST APIs, data pipelines & ETL, geospatial workflows, multi-tenant architecture, OWASP-oriented security review

Languages: Turkish (native) · English (professional working proficiency) · Spanish (A2)

EDUCATION

B.Sc. in Mechatronics Engineering — Bahçeşehir University, Istanbul, Türkiye

2015
